JANUARY 2022

## LASER SURGERY SARCROID

With the colder weather and fewer flies around (making post-surgery management easier) it is an ideal time of year to think about being proactive about those 'dreaded' sarcoids. Laser removal has a less than 10% recurrence rate in comparison to other treatments. Becoming increasingly popular rather than referrals, the procedure is quick, simple and carried out on the yard (mains power is required). We will be gathering numbers early January to arrange our next laser clinic. Please contact the practice if you have any concerns regarding sarcoids or would like further information on the treatment.
