Your Horse, Your Choice

WORMING

Spring is here and it's a good time to think about your horses worming plan. All you need to get started is to collect a small amount of fresh dung for each horse and its field companions and have a simple worm egg count test performed.

JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER
					THE GRAZING SEASON Select one active ingredient for each grazing season and dose at recommended intervals or based on worm egg count results.						
	Repeat Small Redworm Encysted Larval treatment (if necessary)	Tapeworm treatment			Me/Fen-bendazole — To reduce the risk of worm resistance rotate the active ingredient each grazing season — Aver/Iver-mectin — Pyrantel Embonate			Tapeworm treatment		Small Redworm Encysted Larval treatment	Bot treatment

Worm egg counts prevent the un-necessary and ineffective use of wormers, save money for those horses not needing treatment and minimises the problem of resistance. Resistance to a wormer is where the product used becomes ineffective at killing the intended parasite.
